

Set ClickUp Tokens

Stores your ClickUp and TinyURL API credentials in the local add-in cache. This command must be run once before any other Plus Project command will function.

Location: Quick Access Toolbar (QAT) > PowerTools Settings > Set ClickUp Tokens

Fields

Field	Required	Description
ClickUp API Token	Yes	Personal API token from your ClickUp account
TinyURL API Token	No	API token from your TinyURL account; required only when using Link Document to Task in Add Task

Getting Your Tokens

ClickUp API Token

1. Log in to ClickUp.
2. Navigate to your avatar → **Settings** → **Apps**.
3. Under **API Token**, click **Generate** (or copy an existing token).
4. Paste the token into the **ClickUp API Token** field.

Full instructions: [Getting Started with the ClickUp API](#)

TinyURL API Token

1. Log in or register at tinyurl.com.
 2. Go to tinyurl.com/app/dev.
 3. Copy your API token.
 4. Paste it into the **TinyURL API Token** field.
-

Behavior

- Clicking **OK** writes both tokens to `cache/auth.json` inside the add-in folder.
 - If `auth.json` already exists, only the token fields are updated; any other keys are preserved.
 - Leaving a field blank skips writing that token — the existing value is retained.
 - A confirmation dialog confirms a successful save.
-

Storage Location

```
<add-in root>/cache/auth.json
```

```
{  
  "clickup_api_token": "pk_...",  
  "tinyurl_api_token": "..."  
}
```

Note: `auth.json` is not included in source control. Keep your tokens private. When set these tokens are currently stored in clear text.
