

Add ClickUp Task

Creates a new task in the ClickUp list mapped to the current Fusion 360 project. Optionally attaches a shortened "Open in Fusion" link to the task as a custom field.

Location: Design workspace > PowerTools panel > Add ClickUp Task

Prerequisites

- `cache/auth.json` must exist with a valid `clickup_api_token`. Run **Set ClickUp Tokens** if it does not.
- `cache/projects.json` must exist with the active project mapped and a `clickup_list_id` set. Run **Map Project to ClickUp** if it does not.
- A saved Fusion 360 document must be open.

If either cache file is missing, the command displays a setup prompt and exits without opening the dialog.

Dialog Fields

A screenshot of the 'ADD CLICKUP TASK' dialog box. It has a dark background with light-colored input fields. The fields include:

- Task Name:** An input field with no text entered.
- Description:** A larger input field with a cursor at the bottom right corner.
- Due Date (YYYY-MM-DD):** A field containing the date `2026-02-23`.
- Priority:** A dropdown menu set to `Normal`.
- Link Document to Task**: A checkbox with a checked mark.

At the bottom right of the dialog are two buttons: `OK` and `Cancel`.

Field	Required	Description
-------	----------	-------------

Field	Required	Description
Task Name	Yes	Title of the new task
Description	No	Task body; supports Markdown
Due Date	No	Date in YYYY-MM-DD format; defaults to today
Priority	No	Normal (default), Low, High, or Urgent
Link Document to Task	No	When checked, attaches a shortened Fusion "Open on Desktop" URL to the task

Document Linking

When **Link Document to Task** is checked, the add-in:

1. Builds a **fusion360://** deep-link URL for the active document.
2. Shortens the URL via the TinyURL API using the token stored in **auth.json**.
3. Writes the short URL to a custom field named **Fusion Design** on the created task.

If the TinyURL token is missing or shortening fails, the task is created without the document link — no error is raised.

Requirement: The ClickUp list must have a URL-type custom field named **Fusion Design** for the link to be attached. If the field is absent, the link is silently skipped. See [Creating the Fusion Design Custom Field](#) for setup instructions.

The screenshot shows the ClickUp task creation interface. On the left, there's a sidebar with icons for Home, Planner, AI, Teams, Dashboard, Whiteboard, and More. The main area has a title "Add Chamfers to pockets". Below it are various task settings: Status (OPEN), Dates (Start → Fri), Time estimate (Empty), Tags (Empty), Assignees (Empty), Priority (Normal), Track time (Start), and a note field "Add description, or write with AI". A "Custom Fields" section is expanded, showing a list item "Fusion Design" with a link to "tinyurl.com". This "Custom Fields" section is highlighted with a large red rectangle. At the bottom of the task creation screen, there are buttons for "Add subtask", "Relate items or add dependencies", "Create checklist", and "Attach file".

Priority Values

Label	ClickUp Priority
Urgent	1
High	2
Normal	3
Low	4

Behavior

1. Validates that both cache files exist; aborts with a setup message if either is missing.
2. Collects dialog inputs.
3. If **Link Document to Task** is checked, builds and shortens the document URL before posting.
4. Resolves the ClickUp List ID from `projects.json` using the active project URN.
5. POSTs to `https://api.clickup.com/api/v2/list/{list_id}/task`.
6. Displays a success message with a link to the newly created task, or an error message if the API call fails.

Error Conditions

Condition	Message
auth.json or projects.json missing	Setup Required — prompts to run Set Tokens and Map Project
ClickUp API token missing from auth.json	Authentication Error
Active project not mapped or no List ID	List ID Not Configured
No active saved document	Project Not Found
ClickUp API returns an error	Displays HTTP status and response body
