# Open ClickUp

Opens the ClickUp list mapped to the current Fusion 360 project in your default web browser. No dialog is shown — the browser opens immediately.

Location: Design workspace › PowerTools panel › Open ClickUp

Prerequisites

- A saved Fusion 360 document must be open.
- The active project must be mapped via **Map Project to ClickUp**.

If the project is not yet mapped, a message will prompt you to run **Map Project to ClickUp** first.

Behavior

1. Reads the active document's parent project URN.
2. Looks up the URN in `cache/projects.json`.
3. Opens the stored `clickup_url` in the default browser.

The command produces no confirmation dialog on success — the browser tab opening is the confirmation.

Error Conditions

Condition	Message
No document open	Prompts to open a saved Fusion document
Document is unsaved	Prompts to save the document
Project not mapped	Prompts to run Map Project to ClickUp
`projects.json` missing	Prompts to run Map Project to ClickUp
No URL stored for project	Prompts to re-run Map Project and set a URL
