Map Project to ClickUp

Links the active Fusion 360 project to a specific ClickUp list. This mapping is required before **Open ClickUp** or **Add ClickUp Task** can be used for the project.

Location: Quick Access Toolbar (QAT) › PowerTools Settings › Map Project to ClickUp

---

Prerequisites

- A saved Fusion 360 document must be open (unsaved documents are rejected).
- A ClickUp list must already exist for the project.

Fields

Field	Editable	Description
Project Name	No	Fusion project name, populated automatically
Project URN	No	Fusion project identifier, populated automatically
ClickUp URL	Yes	Full URL of the ClickUp list or view to associate with this project
ClickUp List ID	Yes	Numeric List ID used by Add Task to post new tasks

---

Finding the ClickUp URL and List ID

1. In ClickUp, navigate to a **List** (not a Folder or Space).
2. Copy the full URL from your browser's address bar — paste this into **ClickUp URL**.
3. The List ID is the number that follows `/li/` in the URL.

Example:

```
https://app.clickup.com/XXXXXXXXXX/v/l/li/1234567891011
                                           ^^^^^^^^^^^^^
                                    List ID: 1234567891011
```

> **Important:** Use a URL that points to a **List**, not a Folder or a Space. Tasks cannot be created against a Folder or Space ID.

Behavior

- Clicking **OK** writes the mapping to `cache/projects.json` keyed by the Fusion project URN.
- If the project is already mapped, the existing entry is updated; all other fields in the entry are preserved.
- The **OK** button is disabled until a ClickUp URL is entered.

Storage Location

```
<add-in root>/cache/projects.json
```

```
{
  "projects": {
    "<project-urn>": {
      "project_name": "My Project",
      "clickup_url": "https://app.clickup.com/...",
      "clickup_list_id": "1234567891011"
    }
  }
}
```
